

anony_v1 - Triangle Bot

Simple Setup Guide

MT5 Setup + CMD Basics + Double-Click Run + VPS/RDP

Yeh guide bilkul simple language mein hai.

Step-by-step follow karo - 15 minute mein bot chalu ho jayega.

Made by @codex_here

Kya Sikhoge Iss Guide Mein

- * MT5 install + Tools menu mein settings
- * CMD kholna aur basic commands
- * Bot ko double-click se open karna (.bat file)
- * VPS / RDP pe bot 24x7 chalana
- * Common problems aur solutions

PART 1: MT5 Terminal Setup

MT5 Install

Step 1.1. Apne broker ki website pe jao (Exness, IC Markets, FBS koi bhi)

Step 1.2. Wahan se 'MT5 Download' link dhundo - Windows wala .exe download karo

Step 1.3. Install karo - default settings rakho - Next > Next > Finish

Step 1.4. Install ke baad MT5 automatically open hoga

Account Login

Step 2.1. MT5 mein top-left corner: 'File' menu click karo

Step 2.2. 'Login to Trade Account' option pe click karo

Step 2.3. Box khulega - apne broker ki details daalo:

```
Login      : 12345678          (broker se mila account number)
Password   : aapka trading password
Server     : Exness-MT5Real4   (broker server name)
```

Step 2.4. 'Login' button click karo

Step 2.5. Bottom-right corner mein numbers chalne lage = connected ho gaya

AGAR LOGIN FAIL HO: Server name galat hai usually. Broker se confirm karo. Demo aur Live ke server alag hote hai.

PART 2: MT5 Tools Menu Settings (CRITICAL)

YEH STEP MISS KIYA TO BOT TRADES NAHI KAREGA. Hamesha pehle yeh karo!

Tools > Options Settings

- Step 1.** MT5 mein top menu bar mein 'Tools' click karo
- Step 2.** Drop-down se 'Options' click karo (ya direct Ctrl+O dabao)
- Step 3.** Window khulega - left side tabs hai - 'Expert Advisors' tab pe click karo
- Step 4.** In checkboxes ko TICK karo:
 - * ☒ Allow algorithmic trading
 - * ☒ Disable algo trading when account changed
 - * ☒ Allow DLL imports
 - * ☒ Disable DLL imports when account changed (optional)
- Step 5.** 'OK' button click karo - settings save ho jayegi

AlgoTrading Button GREEN Karo

- Step 1.** MT5 toolbar mein top center area dekho
- Step 2.** 'Algo Trading' button hai - circular icon ke saath
- Step 3.** Agar RED hai = disabled, GREEN hai = enabled
- Step 4.** Ek baar click karo - GREEN ho jayega

Confirm karne ka tarika: bot start hote hi 'startup test trade' karega EURUSD pe. 10 second baad close. Test trade ho gaya = sab settings sahi hai.

Symbols Add Karo (Market Watch)

- Step 1.** MT5 mein 'View' menu > 'Symbols' (ya Ctrl+U)
- Step 2.** Saare 19 symbols add karo - har ek pe right-click > 'Show'
- Step 3.** Yeh symbols add karne hai:

Forex	:	EURUSD	GBPUSD	USDJPY	USDCHF	AUDUSD
		NZDUSD	USDCAD	EURGBP	EURJPY	GBPJPY
		AUDJPY	CADJPY	CHFJPY	EURAUD	EURCHF
Crypto	:	BTCUSD	ETHUSD			
Metals	:	XAUUSD (Gold)	XAGUSD (Silver)			

Broker pe symbol ka naam different ho sakta hai (BTCUSDM, XAUUSD.s etc.). Aap ke broker ke exact naam check karo - script same naam expect karta hai.

PART 3: CMD Setup (Command Prompt)

CMD Kholne Ka Tarika

3 tarike CMD kholne ke - koi bhi use karo:

- * Method 1: Win+R dabao > 'cmd' type karo > Enter
- * Method 2: Start menu > 'Command Prompt' search karo > click
- * Method 3: Folder mein address bar mein 'cmd' type karke Enter (folder mein direct CMD khulega)

Python Install Check

Step 1. CMD mein yeh command type karo:

```
python --version
```

Step 2. Output 'Python 3.11.x' (ya 3.7+) aana chahiye

Step 3. Agar 'not recognized' error aaye to Python install karo:

- * python.org/downloads pe jao
- * Python 3.11 download karo
- * Install karte time 'Add Python to PATH' tick karo (IMPORTANT)
- * Install ke baad CMD restart karo

Required Libraries Install

Step 1. CMD mein yeh ek line copy-paste karo aur Enter:

```
pip install MetaTrader5 pandas numpy colorama pywin32
```

Step 2. 1-2 minute lagega - install hone do

Step 3. 'Successfully installed' message aaye = ho gaya

Manual Bot Run (CMD se)

Step 1. CMD mein folder change karo jahan script hai:

```
cd Desktop\TriangleBot
```

Step 2. Bot start karo:

```
python triangle_bot_v3.0_PROTECTED.py
```

Step 3. GUI window khul jayega - bot scanning shuru

PART 4: Double-Click Se Bot Open Karo

CMD command yaad rakhna mushkil hai. Iske jagah ek .bat file banao - uss pe double-click karoge to bot automatic chalu ho jayega - bilkul normal app ki tarah.

BAT Launcher File Banane Ka Tarika

Step 1. Bot ki folder mein jao (jahan triangle_bot_v3.0_PROTECTED.py hai)

Step 2. Folder ke khali jagah pe right-click > 'New' > 'Text Document'

Step 3. File ka naam rakho: START_BOT.bat (extension .bat zaroori hai)

Agar file extension .txt hi ban raha hai aur .bat nahi hota:

File Explorer mein 'View' menu > 'File name extensions' tick karo. Phir rename karke .bat ho jayega.

Step 4. START_BOT.bat pe right-click > 'Edit' (Notepad mein khulega)

Step 5. Yeh content paste karo:

```
@echo off
title Triangle Bot v3.0
cd /d "%~dp0"
echo =====
echo   Triangle Bot v3.0 - anony_v1
echo =====
echo.
echo Make sure MT5 is open and logged in!
echo.
python triangle_bot_v3.0_PROTECTED.py
pause
```

Step 6. File save karo (Ctrl+S) aur close karo

Step 7. Ab START_BOT.bat pe DOUBLE-CLICK karo - bot khul jayega!

Pro tip: START_BOT.bat ka shortcut Desktop pe bana lo (right-click > Send to > Desktop). Phir Desktop se hi double-click karke bot run kar sakte ho.

Bot Auto-Start On Windows Boot

Computer on hote hi bot automatic chalu ho:

Step 1. Win+R dabao > 'shell:startup' type karo > Enter

Step 2. Startup folder khulega

Step 3. START_BOT.bat ka shortcut iss folder mein paste karo

Step 4. Ab har baar PC on hone pe bot automatic start hoga

PART 5: VPS / RDP Pe Bot 24x7 Chalana

VPS = Virtual Private Server. Aap ki PC band ho to bhi cloud server pe bot chalta rahega 24x7. Internet disconnect ya light gayi - bot fir bhi chalu rahega.

VPS Kyun Chahiye?

- * Trading 24x7 hoti hai - bot bhi 24x7 chalu rehna chahiye
- * Aap ki PC band hone pe trades miss honge
- * Ghar ka internet disconnect = bot ruk jayega
- * VPS = high-speed datacenter mein server - never goes down

Forex VPS Provider Choose Karo

Trading ke liye Windows VPS chahiye. Best providers:

- * ForexVPS.net - dedicated forex VPS, \$30-50/month
- * Beeks Financial Cloud - premium, \$40-60/month
- * Contabo - cheap general VPS, \$5-10/month (works fine)
- * Vultr - \$6-12/month, Windows VPS available
- * AWS / Azure - \$15-30/month, free tier 1 year

Recommended for beginners: Contabo Cloud VPS S - Windows Server 2022, 8 GB RAM, around \$7/month. Cheap aur reliable.

VPS Order + Setup Steps

- Step 1.** Provider ki website pe Windows VPS plan order karo
- Step 2.** Email pe milegi: VPS IP address + username + password
- Step 3.** Apni Windows PC pe RDP open karo:
- * Win+R dabao > 'mstsc' type karo > Enter
 - * 'Remote Desktop Connection' window khulega
- Step 4.** VPS IP address daalo > Connect
- Step 5.** Username + password daalo (provider se mile credentials)
- Step 6.** VPS ka desktop khul jayega - Windows ki tarah hi dikhega

VPS Pe Setup

VPS bilkul aap ki normal PC ki tarah hai. Wahin saare steps repeat karo:

- * MT5 install karo (broker se download)
- * MT5 mein login karo (Part 1 ki tarah)
- * Tools > Options mein settings karo (Part 2)
- * Symbols add karo Market Watch mein
- * Python install karo (Part 3)
- * pip install karke libraries install karo
- * triangle_bot_v3.0_PROTECTED.py file VPS pe transfer karo
- * START_BOT.bat banao (Part 4)
- * Double-click se bot start karo

File VPS Pe Kaise Bhejni Hai?

RDP session mein file transfer ka simple tarika:

- * Apni PC pe file copy karo (Ctrl+C)
- * RDP window mein VPS desktop pe paste karo (Ctrl+V)
- * Ya RDP options mein 'Local Resources > Drives' tick karo - phir aap ki C: drive VPS mein dikhegi

VPS Disconnect Karo: RDP window close karne se VPS BAND nahi hota - background mein chalta rehta hai. Window close ya minimize kar do - bot chalu rahega.

PART 6: Common Problems

Problem: 'python not recognized'

- * Python install nahi hai ya PATH mein nahi hai
- * Solution: Python re-install karo aur 'Add to PATH' tick karo

Problem: 'MetaTrader5 module not found'

- * CMD mein chalao: pip install MetaTrader5

Problem: Bot says 'MT5 nahi mila'

- * MT5 terminal open hai? Login hua hai?
- * Bottom-right green dot dikhna chahiye = connected
- * 32-bit Python + 64-bit MT5 mismatch ho sakta hai - same architecture rakho

Problem: 'AlgoTrading DISABLED'

- * Tools > Options > Expert Advisors > 'Allow algorithmic trading' tick karo
- * Toolbar mein AlgoTrading button GREEN karo

Problem: Trades reject ho rahe

- * Market closed hai (weekend/off-hours)
- * Symbol Market Watch mein add nahi hai
- * Account mein margin nahi hai

Problem: BAT file mein output dikha ke close ho jata hai

- * BAT file ke last line mein 'pause' add karo
- * Error message dikhne lagega - solve kar sako

Problem: GUI nahi khul raha

- * CMD mein run karo: python triangle_bot_v3.0_PROTECTED.py --console
- * Console mode mein chalega bina GUI ke

Quick Reference Card

Daily Routine

- * PC ya VPS on karo
- * MT5 open hone do (auto if startup)
- * Login confirm - green dot
- * START_BOT.bat double-click
- * Bot scanning shuru ho gaya

Weekly Routine

- * Trade journal CSV check karo
- * Win rate aur P&L review karo
- * Profit weekly withdraw karo

Important Reminders

- * Risk per trade NEVER 2% se zyada
- * Demo pe 2-4 hafte test karo pehle
- * News events ke time bot band karo
- * Daily loss limit hamesha enabled

Bas itna hi! Bot ab chalu hai aur 24x7 trading kar raha hai.
Koi problem aaye to logs check karo aur troubleshooting section dekho.

Happy Trading!
