

TeraBox Automation Tool

Complete Installation & Usage Guide

@codex_here

REQUIREMENTS

- Windows 10/11
- Python 3.7+
- Google Chrome browser (latest)
- Internet connection

STEP 1 - INSTALL PYTHON

Download Python from the official website:

```
https://python.org/downloads
```

IMPORTANT: Tick "Add Python to PATH" during installation

Verify installation by opening CMD and typing:

```
python --version
```

STEP 2 - DOWNLOAD TOOL

Method 1 (with Git):

```
git clone https://github.com/Miten001/userbot.git
```

Method 2 (without Git):

Open CMD and run:

```
curl -L -o userbot.zip https://github.com/Miten001/userbot/archive/refs/heads/uncheck.zip
```

Extract:

```
tar -xf userbot.zip
```

Go to folder:

```
cd userbot-uncheck\tools\terabox-automation
```

Method 3 (Manual):

Download ZIP from <https://github.com/Miten001/userbot> browser me open karke

Open CMD in the terabox-automation folder and run:

```
pip install selenium pyautogui
```

If pip not found:

```
python -m pip install selenium pyautogui
```

STEP 4 - RUN

Open CMD in the terabox-automation folder and run:

```
python main.py
```

GUI will open with dark theme.

HOW TO USE - GUI OPTIONS

- Link (URL): Paste any URL you want to open (default: TeraBox link)
- Pages (1-1000): How many browser windows to open simultaneously
- Use Proxy / IP Rotation: Check to enable proxy (OFF by default)
- Proxies box: Paste custom proxies (IP:PORT format, one per line)
- Start Automation: Opens all browsers and does Login > Sign up > Email click
- Stop: Cancel anytime
- Close Browsers: Close all Chrome windows
- Close All Tabs: Kill all Chrome processes

FEATURES

- Dark hacker theme GUI with @codex_here branding
- Up to 1000 pages simultaneously
- Each browser has unique fingerprint (User-Agent, GPU, Screen, Canvas, etc.)
- IP rotation support (Saudi Arabia, UAE, US, South Korea, Japan, Mexico, Qatar)
- Grid layout - all browsers arranged neatly on screen
- Zoom out 80% for better visibility
- Real-time status/terminal output

TROUBLESHOOTING

- "Chrome not found" -> Install Google Chrome
- "pip not found" -> python -m pip install selenium pyautogui
- "tkinter not found" -> Reinstall Python with tkinter checked
- "This page isn't working" -> Uncheck proxy checkbox, use direct connection
- "Browser not opening" -> Make sure Chrome is updated

- "Selenium connection failed" -> Close all Chrome windows and try again
- Pages overlapping -> Tool auto-arranges in grid, close extra windows

ONE-LINER INSTALL (copy paste in CMD)

With Git:

```
git clone https://github.com/Miten001/userbot.git && cd userbot\tools\terabox-automation &
```

Without Git:

```
curl -L -o userbot.zip https://github.com/Miten001/userbot/archive/refs/heads/uncheck.zip &
```
